EBONY

Sierra Stone is a decorative stone and epoxy overlay that is most commonly used on concrete but may also be applied over tile, wood or even fiberglass. Composed of North America's most beautiful natural stone, Sierra Stone is available in seven main colors and multiple blends. Designs such as logos and numbers can be created using contrasting combinations of stone.

The beauty of the outdoors can be brought indoors along with advantages such as easy maintenance, durability, and a non-slip surface. Sierra Stone will not absorb stains or odors making it both pet-friendly and non-allergenic.

Commercially we have supplied flooring for retail and industrial applications such as restaurants, banks, malls, showrooms, and warehouse facilities. Residentially, solariums, porches, bathrooms, rec-rooms, basements, dens, kitchens, and essentially any room in the home are ideal locations for Sierra Stone.

Sierra Stone is one of the most durable flooring alternatives known today. It can be left as a porous floor in which water disappears and drains the way it did before the stone was applied. If sealed, the floor becomes non-porous and has a textured appearance.
